

TERMS OF USE - DnA Platform | Storage Bucket

1 Scope of Application

These Terms of Use are in addition to the [general Terms of use of the DnA Platform](#) and additionally govern the usage of the DnA Platform – Storage Bucket service, its content and the service offered within it or through it. Please read these Terms of Use carefully as they are a binding agreement between the Service User (referred to as “you”, “your” hereafter) and the service provider of the DnA Platform (referred to as “we”, “us”, “our” hereafter).

By using the service, you are acknowledging that you have carefully read and understand these Terms of Use, that you will make any third party working on behalf of you aware of the content of this agreement and that you accept these terms and conditions.

If you do not agree to these Terms of Use or to the general Terms of use of the DnA Platform, you have no right to use the service.

1.1 Context of Service

The DnA Platform - Storage Bucket is an instance where data can be stored with the aim to build self service solutions on it and to share data to other self-service use cases for internal use of the Mercedes-Benz group. The data are stored in the MBAG data center Frankfurt (Germany) on-premise. The service can only be requested by employees or externals with an MB-user account of the Mercedes-Benz Group AG and its subsidiaries.

2 Obligation and Duties

2.1 Compliance with general Obligation & Duties

In order to avoid redundancies, please observe the obligations and duties arising from the [general terms of use of the DnA platform](#) for this service.

- 1.2 Regulations for Information Security (RISE)
- 1.3 Data Classification
- 2.2 Entering or Uploading of Data
- 2.3 Usage of Data
- 2.4 Sharing of Data
- 2.5 Corporate Separateness and Regional Setup

2.2 Access of Data

The Service User needs to implement data permissions which to comply with all applicable requirements of A22 and [RISE](#) (e.g. need-to-know principle).

2.3 Data Availability

The availability is 98.5% of SLA. Data replication takes place in a single availability zone and is fully hosted and running in the DyP Caas On-Premises Cloud.
